20+

YEARS IN MEDIA PRODUCTION

For over 20 years, I have combined creative and technical expertise with a passion for visual storytelling. My focus is on enhancing visual quality, optimising production processes and integrating new technologies into professional workflows. My multidisciplinary background allows me to bridge the gap between creative vision and technical execution.

Personal Profile

I have always been fascinated by creativity and technology. I don't simply work through projects; I immerse myself in them, develop solutions and take responsibility for the outcome.

Curiosity and a passion for learning shape my work. I see generative AI as a natural evolution of traditional filmmaking, opening up new creative possibilities.

As a technical diver, diving instructor and glider pilot, I value careful preparation, responsibility and clear decision-making.

My ties to Europe and Southeast Asia have taught me to appreciate different cultures and perspectives. I enjoy working independently, sharing knowledge and developing ideas as part of a team.

Core Expertise

01

Film & TV Editing

Storytelling, dramaturgy, multicam editing and post-production

02

Generative AI

Image and video generation, reference-based workflows and creative production using ComfyUI.
